This map was developed as part of the Comprehensive Statewide Forest Inventory Analysis and Study (CSFIAS) initiated by the State of Florida. This map depicts the sustainability of non-reserved pine pulpwood (5.0" to 8.9" DBH) resources as indicated by the ratio of 2013 net growth to estimated 2013 demand. Non-reserved timber is total timber minus reserved timber based on ownership class and forest type. Timber and demand data is based on the 2013 Forest Land Cover, 1971-2013 Stand Age output analyses, 2013 Florida Department of Revenue parcel data, 2013 FIA data, the Statewide Primary Wood Using Mills data and data from BioResource Mgmt, Inc.

Photo Science and the Florida Dept. of Agriculture and Consumer Services make no warranties, representations or guarantees, either expressed or implied, as to the completeness, accuracy or correctness of the data, nor accept or assume any liability arising from or for any incorrect, incomplete or misleading data provided pursuant to this request.
